Subject **Siniat Firetex - fire-rated plasterboard**

Dear Valued Customer,

Due to global supply chain disruptions impacting the manufacture of Siniat fire-rated boards, Siniat have introduced several interim measures to ensure we can continue to make fire-rated systems available to our customers.

With immediate effect, Siniat have introduced **Firetex** as a supplementary fire-rated board. Firetex is a previously certified Fireshield (fire rated plasterboard) formulation. For most applications Firetex will provide the same fire performance as Fireshield and all fire reports based on the previously certified Fireshield formulation apply to Firetex.

Firetex also offers the same acoustic performance as Fireshield.

To find Fire Resistance Level (FRL) performance information, scan below:

Note that the fire performance of Interhome systems is unaffected and Firetex can replace Fireshield without affecting the Fire Resistance Level.

Please continue to refer to Siniat Blueprint V3 or Siniat Interhome manual for installation details of fire rated plasterboard. The Siniat Technical and Sales Teams are also available to assist with any technical specification questions you may have.

Yours sincerely,

Siniat Australia
